Khee Giap Tan, Randong Yuan, Sangiita Wei Cher Yoong : 2014 Annual Provincial and Regional Competitiveness Analysis for Greater China Economies:Development Strategies under the New Normal (Asia Competitiveness Institute - World Scientific Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised 2014 Annual Provincial and Regional Competitiveness Analysis for Greater China

After more than three decades of rapid growth, China is now entering into the New Normal Era, which will be characterised by slower but sustainable, quality growth for several decades to come. How China will fare under the New Normal Era matters not only for itself but also for its great impact on global prosperity. While presenting as the second instalment of ACI's annual tracking of the dynamics of competitiveness among 34 Greater China economies, this volume also includes the results of the inaugural regional competitiveness analysis for five regions of Greater China. As regional imbalance in socioeconomic advancement is a serious issue China has to face up to under the New Normal Era, the results of such competitiveness analysis at provincial and regional levels offer insights for policy-makers to help address concerns associated with the regional disparity in development, and facilitate industry leaders and other stakeholders in identifying challenges and opportunities for sound decision making.
