**Edna Tan, Angela Calabrese Barton, Erin Turner, Maura Varley Gutierrez : Empowering Science and Mathematics Education in Urban Schools** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Empowering Science and Mathematics Education in Urban Schools:

Math and science hold powerful places in contemporary society, setting the foundations for entry into some of the most robust and highest-paying industries. However, effective math and science education is not equally available to

all students, with some of the poorest students—those who would benefit most—going egregiously underserved. This ongoing problem with education highlights one of the core causes of the widening class gap.

“With its potential to be a professional life changing book, *Empowering Science Mathematics Education in Urban Schools* is a must read for all individuals who have a stake in science education, including science education researchers, professional development providers, and school administrators of curriculum and instruction, so that social justice pedagogy becomes part of the repertoire of good teaching in order to strive for equity and science for all.”
