From North Holland : Multivariate Analysis: Future Directions 2: No. 2 (North-Holland Series in Statistics and Probability) before purchasing it in order to gage whether or not it would be worth my time, and all praised Multivariate Analysis: Future Directions 2: No. 2 (North-Holland Series in Statistics and Probability):

The contributions in this volume, made by distinguished statisticians in several frontier areas of research in multivariate analysis, cover a broad field and indicate future directions of research. The topics covered include discriminant analysis, multidimensional scaling, categorical data analysis, correspondence analysis and biplots, association analysis, latent variable models, bootstrap distributions, differential geometry applications and others. Most of the papers propose generalizations or new applications of multivariate analysis. This volume will be of great interest to statisticians, probabilists, data analysts and scientists working in the disciplines such as biology, biometry, ecology, medicine, econometry, psychometry and marketing. It will be a valuable guide to professors, researchers and graduate students seeking new and promising lines of statistical research.
