Pierre-Camille Lacaze, Jean-Claude Lacroix : Non-volatile Memories (Iste) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Non-volatile Memories (Iste):

Written for scientists, researchers, and engineers, Non-volatile Memories describes the recent research and implementations in relation to the design of a new generation of non-volatile electronic memories. The objective is to replace existing memories (DRAM, SRAM, EEPROM, Flash, etc.) with a universal memory model likely to reach

better performances than the current types of memory: extremely high commutation speeds, high implantation densities and retention time of information of about ten years.
