It is an excellent source of vital info that you need to know. It leads you through the processes, questions, and important decisions that every inventor needs to know about in order to be a better inventor. Key invention concepts include: obviousness, prior art, claims development, foreign versus U.S. legal deadlines, provisional vs. regular patent application, and much much more. One of the major obstacles to getting a patent is the requirement that an invention not be "obvious". This one requirement has torpedoed a lot of potential inventions, so be sure you read about this in the book. Also, the book explains about the careful legal

path you need to navigate to avoid damaging your foreign patent potential. You should buy the latest edition of this book because it will include info about the change in U.S. patent law. The U.S. Patent system now is "first to file", NOT "first to invent" which brings the U.S. in synch with most other foreign patent systems. One final thing, be careful you don't get arthritis in your finger joints from counting all the hundred-dollar bills you get from licensing or selling your successful invention!

"Patenting an idea can be really expensive and intimidating. When I was starting out, I read this terrific book called Patent It Yourself, by a lawyer named David Pressman. It was really straightforward. Using that book, I wrote GoProrsquo;s first patent myself. It was this 600-page tome that I went maniacal on. When I took it to the attorneys to get their opinion and to see how much it would cost for them to finalize it, they told me Irsquo;d just saved myself a lot of moneyIrsquo;d basically done the whole thing myself. More important, the book gave me a good understanding of whatsquo;s patentable and whatsquo;s not. For any entrepreneur whorsquo;s inventing something, itrsquo;s the one book you should read."
