From Routledge : Trade Policy and Industrialization in Turbulent Times before purchasing it in order to gage whether or not it would be worth my time, and all praised Trade Policy and Industrialization in Turbulent Times:

The relationship between trade policy and industrialization has provoked much controversy. Can trade policy promote economic growth in developing countries? Those actively working in the area are becoming increasingly sceptical about the conventional advice given by international policy advisors and organizations. This volume builds upon

earlier theoretical and empirical research on trade policy and industrialization but is the first cross-the-board attempt to review developing country experiences in this realm for twenty years. The experience of fourteen developing countries in the 1970s and 1980s is assessed by the contributors, each of whom have a detailed understanding of their country's recent experience.

'Leick's Dictionary of Ancient Near Eastern Architecture is a representative of the type of specialised reference book that may become more and more necessary as the archaeological data-base expands and diversifies.'

Antiquity 'Clearly written and easy to use ... [with] clear summaries of the major architectural features of important sites ... this book should be most valuable.'

Institute of Archaeology Bulletin
From the Back Cover
The relationship between trade policy and industrialization has provoked much controversy. Can trade policy promote economic growth in developing countries? Those actively working in the area are becoming increasingly sceptical about the conventional advice given by international policy advisors and organizations.
