Four StarsBy Olin B.I never stop learning how our world is changing at a more rapid pace.2 of 2 people found the following review helpful. ValueWeb Looks At Who Will Win, Who Will Lose, And What Makes The DifferenceBy Tom GroenfeldtReal-time mobile banking from anywhere anytime all too often meets legacy batch-based banking systems designed to support paper interactions with branches. The future will bring Internet of Things with your fridge ordering groceries and your car driving itself to the petrol station to refuel. Bankers rightly fear an Uber event where they are bypasses entirely or relegated to utilities by fast-moving fintech firms that take over the customer relationship and provide added services and earn significant profits that might have gone to banks. Chris has been in the midst of this change and knows the leading, and lagging, banks around the world and draws from their experiences, insights from fintech leaders, and his exceptionally well-informed views to provide fascinating insights of where this could go. Banks face big challenges, but he thinks (sometimes contrary to his anecdotes) that the biggest will survive. This is a great journey through the key topics, from technology to regulation and culture.

The Internet of Things is all about machines trading with machines ndash; your fridge orders groceries; your car, fuel; your television, entertainment; and so on. However, machines cannot trade with machines if it's expensive and slow. Would you really want your TV to order the next season of Games of Thrones, if the payment took ten days and cost \$25 or more? Unfortunately with the way the bank system works today, that is the problem we face today. As a result, we need an Internet of Value to work with the Internet of Things. The Internet of Value mdash; or ValueWeb, for short mdash; allows machines to trade with machines and people with people, anywhere on this planet in real-time and for free. Using a combination of technologies from mobile devices to bitcoin and the blockchain, fintech firms are building the ValueWeb.nbsp;The question then is what does this mean for financial institutions, governments and citizens? This book provides the answers.

About the AuthorChris Skinnerisbest known as an independent commentator on the financial markets through theFinanser ([www.thefinanser.com](http://www.thefinanser.com)) and Chairof the European networking forum The Financial Services Club, which he foundedin 2004.
