**Catherine Breniquet, Céécile Michel : Wool Economy in the Ancient Near East (Ancient Textiles Series)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Wool Economy in the Ancient Near East (Ancient Textiles Series):

The history of the Ancient Near East covers a huge chronological frame, from the first pictographic texts of the late 4th millennium to the conquest of Alexander the Great in 333 BC. During these millennia, different societies developed in a changing landscape where sheep (and their wool) always played an important economic role. The 22 papers presented here explore the place of wool in the ancient economy of the region, where large-scale textile production began during the second half of the 3rd millennium. By placing emphasis on the development of multi-disciplinary methodologies, experimentation and use of archaeological evidence combined with ancient textual sources, the wide-ranging contributions explore a number of key themes. These include: the first uses of wool in

textile manufacture and organization of weaving; trade and exchange; the role of wool in institutionalized economies; and the reconstruction of the processes that led to this first form of industry in Antiquity. The numerous archaeological and written sources provide an enormous amount of data on wool, textile crafts, and clothing and these interdisciplinary studies are beginning to present a comprehensive picture of the economic and cultural impact of woollen textiles and textile manufacturing on formative ancient societies.

About the Author: *Cécile Michel* is Director of Research at the CNRS. She specialises in the study of cuneiform tablets, and trade and society in Upper Mesopotamia and Anatolia.
